Areas of Expertise: : Enterprise Business Intelligence and Analytics Engineering, Data Architecture and ETL Pipeline Development, Advanced Python and SQL, Cloud Data Platforms and Warehousing (Snowflake, Azure Databricks, MySQL, Fivetran), Data Modeling and Performance Optimization, Executive Dashboards and Data Visualization (Tableau, PowerBI), Big Data Processing (PySpark, Snowpark), Automated Reporting and Workflow Orchestration, KPI Design and Advanced Analytics, Data Quality, Governance, and Compliance, Cross-Functional Collaboration with Product, Engineering, and Data Science, Enterprise Systems and CRMs (Salesforce, SAP, Oracle Peoplesoft, Zendesk, Jira)

WORK EXPERIENCE:

Axis Care

BI Engineer

Remote (Waco, Texas)

January 2024 – Current

- Designed, developed, and maintained Tableau dashboards supporting 80+ home healthcare agencies, delivering actionable operational, financial, and performance insights to business and executive stakeholders.
- Led end-to-end requirements gathering, technical discovery, and client-facing demos, translating business needs into scalable BI and analytics solutions.
- Provided Tier 1–2 BI production support, resolving data quality, performance, and reporting issues to ensure reliable, high-availability dashboards.
- Developed and optimized Python and SQL data processing scripts to improve ETL efficiency, enhance data reliability, and reduce processing overhead.
- Collaborated cross-functionally with Product, Engineering, and Data teams to define KPIs, standardize data models, and deliver analytics initiatives aligned with roadmap and customer needs.

Corning Life Sciences

Data Engineer

Tewksbury, MA

July 2021- December 2023

- Engineered and maintained Python- and SQL-based ETL pipelines ingesting data from 6+ heterogeneous data sources, supporting analytics and reporting used across multiple product lines and leadership teams.
- Automated Power BI and Excel reporting pipelines and scheduled web scraping workflows, reducing manual reporting effort and increasing operational efficiency by 30%+ for Product Line Managers.
- Partnered with 10+ Business Managers and Directors across Finance, Operations, Supply Chain, and Product to define KPIs and deliver data-driven insights for planning and performance management.
- Supported machine learning and predictive analytics initiatives by preparing, validating, and transforming large datasets to improve model readiness and downstream analytics.
- Improved data reliability and scalability by standardizing ETL workflows, reporting logic, and documentation, reducing recurring data issues and enabling faster delivery of new analytics use cases.

PROJECTS:

Production Capacity Forecasting

2022

- Engineered automated data ingestion workflows using Pandas and Selenium to collect backorder volumes, monthly demand forecasts, current production capacity, and planned capacity increases across 20+ product lines.
- Developed Power BI dashboards with scenario modeling and capacity planning logic, enabling stakeholders to quantify the impact of capacity expansion on backorder resolution timelines and demand fulfillment accuracy.

Canadian BI Product Launch

2024

- Led the technical delivery of enterprise BI solutions for 30+ Canadian healthcare agencies, supporting international scale and analytics adoption.
- Designed and implemented an end-to-end data pipeline from MySQL to Fivetran to Snowflake, enabling scalable analytics while enforcing compliance with Canadian healthcare data privacy regulations (PIPEDA).
- Built and embedded Tableau dashboards within the Axis Care application, delivering self-service analytics, improving reporting accessibility, and reducing ad hoc reporting requests from customers.

EDUCATION:

University of Massachusetts Lowell

B.S.B.A Management Information Systems Concentration

Lowell, MA

Graduation Date: May 2020
